Work Offered

As a Junior Product & Services Designer your main responsibility is to take broad ideas and needs and turn them into simple, functional, beautiful products and features. You will work closely with our engineering and marketing teams to conceptualise, design and deliver new products and the related services, and leverage interaction, UI, and visual design to do the best work.

Responsibilities and Activities:

- Create thoughtful and appropriate technology connectivity solutions by translating research insights into beautiful and engaging user interfaces which satisfy user needs business requirements and technical constraints.
- Work in our multi-disciplinary product teams and collaborate with our managers, stakeholders and engineers in an iterative, transparent and feedback driven process.
- Produce engaging experiences using sketches, storyboards, information architecture blueprints and prototypes to collect feedback and iteratively improve and support the design process.
- Design and prototype elegant and highly useful flows and experiences across multiple media including our corporate web sites.
- Create user flows, wireframes, site maps, customer journey maps, and other tools to guide the product development process.
- Create high-fidelity mockups and work with engineers and product managers to oversee UI design implementation.

About :

is a startup, with international investors, which supports customers to implement their ideas into electronic commercial and IoT devices for the global markets. We support all aspects of electronic product development, from initial concept and design through to volume production. The partnerships with global leading manufacturers of advanced electronic components enable to deliver high-quality solutions quickly and cost-effectively. Our high performance is due to a combination of engineering excellence, hands-on design and manufacturing capabilities, best practices in project management and strong relationships with technology partners.
